PROJECT REPORT

Name: Shubh Thadani
Registration Number: 25BCE10010
Branch: B.Tech CSE
Course Code: CSE0001 – Digital Literacy

Introduction

Digital literacy is an important skill these days. We need to know how to use tools find information talk to people online in a good way and stay safe on the internet. This project was made to help students like me learn about literacy by doing real things.

As a Student Digital Ambassador I did five tasks that taught me about lots of things like being aware of what's happening online how to look good on the internet places to learn coding, how to talk to people online and how to avoid bad people, on the internet. Each task helped me understand tools better and how to use them in a good way.

Overall this project was really helpful. It made me feel more comfortable using the internet in a responsible way and looking professional when I am online. Digital literacy is something we all need to know about and this project really helped me with my literacy.

Task 1 – Infographic

I made a literacy infographic using Canva for this task. The infographic was made to explain concepts in a simple way that is easy to understand. I picked four topics to talk about: what digital literacy means, how to be safe on the internet how to have a professional presence online and how to use email properly.

The infographic shows how important it is to use tools the right way have strong passwords stay away from bad links and build a professional identity online using sites like GitHub and LinkedIn. It also talks about email rules like using clear subject lines and being respectful.

When I was making the infographic I had a trouble fitting all the information into a small space without making it look messy.. Using pictures and short bullet points made it easier to see what I was saying. This task helped me get better at showing information in a way and it made me see how important it is to share digital knowledge in a simple way that everyone can understand.

I learned a lot about literacy, from this task and I think digital literacy is really important. Digital literacy means being able to use tools and it is a key part of being online. I think

digital literacy is something that everyone should know about.

Task 2 – Digital Portfolio

I made my profiles on GitHub, LinkedIn and Kaggle to have an online presence. On GitHub I made a page that says who I am and what I want to learn about GitHub. On LinkedIn I added where I went to school and what degree I got from my institution. On Kaggle I looked at data science. Wrote a bio that sounds professional.

Each of these websites is good for something. GitHub is good for showing the code I write and seeing how I am doing. LinkedIn is helpful for meeting professionals and looking for jobs. Kaggle is a place to learn about data science and compete with others on Kaggle.

In the few years I will use GitHub, LinkedIn and Kaggle a lot to get better at what I do share the work I do and meet other professionals on these platforms. Making my profiles on GitHub, LinkedIn and Kaggle taught me that it is important to have an online presence because it can affect what happens in my career, on GitHub, LinkedIn and Kaggle.

Task 3 – Platforms

I did this task where I looked at coding practice platforms and tools that people use to work. For coding I used HackerRank. I finished a problem that was not too hard. This helped me get to know the HackerRank website. Made my coding skills a little better.

For working with others I made a Google Form called "Digital Literacy Awareness Quiz" with five questions about being safe using digital tools and talking to people at work. The form had questions where you can choose from answers and questions where you have to write a short answer. I also looked at the answers people gave using Google Sheets, which helped me see how you can get and look at data.

These platforms are really helpful when you are in school. Coding platforms help you get better at solving problems, which's important when you are looking for a job. Google Forms and Sheets are great for getting feedback from people doing surveys and keeping data organized.

This task helped me learn about tools that people use a lot in school and, at work. I got to use these tools and see how they work, which was really helpful. The tools I used were HackerRank Google Forms and Google Sheets and they are all very useful.

Task 4 – Email Etiquette

I did a task where I wrote two emails. One was to ask for time to finish an assignment and the other was to apply for an internship. I also made a list of things to do. Not to do on social media.

This task was helpful because I learned that when I write emails I need to make sure they are well organized and easy to understand. I also need to use a subject line and be respectful.

Sometimes people do not communicate online and this can cause problems. For example if I send a message without a line or a proper hello it can look bad and people might not even read it. This can mean I miss out on opportunities.

So it is really important to communicate and be formal when I am talking to people online. I need to follow the rules of writing emails. This task helped me understand how to communicate when I am in a professional situation. I will make sure to remember this when I write emails, like the ones I wrote for this task to ask for an assignment extension and to apply for an internship.

Task 5 – Cybercrime

I looked at phishing for this task. Phishing is a type of cybercrime. I found out how people who do things on the internet trick users into giving them sensitive information. They do this by sending emails or making fake websites. What really surprised me was how real these phishing attempts can look. This makes them really hard to figure out.

This task taught me to be careful when I click on links and share information on the internet. One thing I will do differently now is make sure websites and messages are real before I do anything. I will always check to see if they are authentic.

Learning about cybercrime made me understand the dangers on the internet. I know now what I need to do to stay safe, from phishing and other cybercrimes. It also made me think that it is important to tell students about cybercrime. If we know about phishing and cybercrime we can prevent things from happening to us.

Conclusion

This project really helped me understand literacy and why it is so important in my daily life. I figured out how to use tools in a better way. I learned how to communicate in a manner and keep my online presence safe.

The tasks, in this project also made me more aware of the dangers that're online and how I can protect myself from them.

Overall I think this project was an experience that will help me with my studies and my future job. It made me want to use technology in a way and keep getting better at using digital tools like digital literacy and digital skills and I will keep working on my digital literacy and digital skills.
